

Electronic manufacturing services

SafeTest is a small professional company that offers a big cost effective solution to many of your companies needs.

In today's environment companies are unable to keep the right number of staff with the correct skill sets to achieve the deadlines set for any given project.

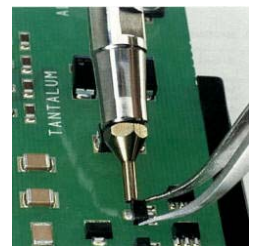

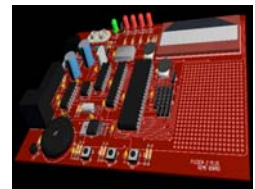

SafeTest can offer your company a one-stop solution centre to relieve the pressure on your engineering team to allow them to concentrate on what they do best - design and improve your product!

At SafeTest our friendly engineer's will work closely with your company to achieve sometimes near impossible results. We believe communication is key; from weekly or even daily status reports to prompt reporting of design issues combined with pro-active solutions were possible.

A company needing extra resource due to timescales or a missing skill set might need one or all of the following services SafeTest can offer:

- 1) Product Prototype
 - a. From concept to detailed design
 - b. Schematic capture
 - c. Creation of Bill of Materials – including second sourcing parts
 - d. PCB layout
 - e. PCB procurement
 - f. Component procurement
 - g. Rapid prototype build - Hand placement of surface mount and conventional components for optimal turnaround.
 - h. Static, functional, thermal and HALT testing as required.
 - i. Mechanical assembly

- 2) Small to Medium Volume Production Build
 - a. PCB Procurement
 - b. Component procurement
 - c. Surface mount component placement
 - d. Conventional placement
 - e. Functional Testing
 - f. Mechanical assembly
 - g. Finished product testing
 - h. Packaging, complete with serial numbering if required
